Situational Analysis

Situation Details	Other Details (optional)	Item Usage (function)	Situation Description
SD02 – High speed		IU01 – Correctly used	Normal driving on a highway during rain (slippery road) with high speed and correctly used system.
SD02 – High speed		IU02 – Incorrectly used	Normal driving on country roads during normal conditions with high speed (the driver is misusing the lane keeping assistance function as an autonomous function)
SD04 - High acceleration		IU01 - Correctly used	Normal driving on country roads during rain with high acceleration (after a bend) and correctly used system.
SD02 - High speed		IU01 - Correctly used	Normal driving on country roads during normal conditions with high speed and correctly used system.

			Hazard Identification
Function	**Deviation**	**Deviation Details**	**Hazardous Event (resulting effect)**
Lane Departure Warning (LDW) function shall apply an oscillating steering torque to provide the driver with haptic feedback	DV04 – Actor effect is too much	The LDW function applies an oscillating torque with very high torque (above limit)	EV00 – Collision with other vehicle
Lane Keeping Assistance (LKA) function shall apply the steering torque when active in order to stay in ego lane	DV03 – Function always activated	As the function is always on, the driver can misuse the function by taking both hands off the wheel and incorrectly treating the car as a fully autonomous vehicle.	EV00 – Collision with other vehicle
Lane Keeping Assistance (LKA) function shall apply the steering torque when active in order to stay in ego lane	DV07 - Actor action too late	The steering wheel torque that should act in the bend to keep the vehicle in the lane is applied too late (after the bend).	EV00 - Collision with other vehicle
Lane Keeping Assistance (LKA) function shall apply the steering torque when active in order to stay in ego lane	DV13 - Sensor sensitivity is too low	The driver steering torque sensor shows a value that is below the actual driver steering torque (e.g. the indicated value is only 5% of the actual torque)	EV00 - Collision with other vehicle

Event Details	Hazardous Event Description	Exposure (of situation)
High haptic feedback can affect driver's ability to steer as intended. The driver could lose control of the vehicle and collide with another vehicle or with road infrastructure.	The LDW function applies too high an oscillating torque to the steering wheel (above limit).	E3 - Medium probability
When the system is not able to work properly (e.g. sudden loss of road marking) the driver is not able to take over the vehicle in time. The vehicle can then collide with another vehicle or with road infrastructure.	As the function is always on, the driver can misuse the function by taking both hand off the wheel and thus the driver is unable to take over the vehicle in time.	E2 - Low probability
The steering torque is applied too late and causes the vehicle to leave the ego-lane and collide with another vehicle.	The steering torque is not applied during a bend but after it which causes the vehicle to exit the ego-lane.	E3 - Medium probability
Due to the indicated driver steering torque that is too low, the electronic power steering ECU demands steering torque that is too high. This causes the vehicle to leave the ego-lane and collide with another vehicle.	The driver steering torque sensor indicates a wrong (too low) value of the actual driver steering torque. Thus the electronic power steering ECU demands a wrong (too high) support torque. The wrong steering torque can cause the vehicle to leave the ego-lane.	E4 - High probability

	Hazardous Event Classification		
Rationale (for exposure)	**Severity (of potential harm)**	**Rationale (for severity)**	**Controllability (of hazardous event)**
Rain is something that does not happen daily but occurs once a month or more often.	S3 - Life-threatening or fatal injuries	A collision with another vehicle at high speed can lead to life-threatening (survival uncertain), fatal injuries	C3 - Difficult to control or uncontrollable
The combination of driving on a country road and misusing the system does not happen often.	S3 - Life-threatening or fatal injuries	A collision with another vehicle at high speed can lead to life-threatening (survival uncertain), fatal injuries	C3 - Difficult to control or uncontrollable
Rain is something that does not happen daily but occurs once a month or more often.	S3 - Life-threatening or fatal injuries	A collision with another vehicle at high speed can lead to life-threatening (survival uncertain), fatal injuries	C3 - Difficult to control or uncontrollable
Driving on country roads under normal conditions is something that occurs during almost every drive.	S3 - Life-threatening or fatal injuries	A collision with another vehicle at high speed can lead to life-threatening (survival uncertain), fatal injuries	C3 - Difficult to control or uncontrollable

	Determination of ASIL and Safety Goals	
Rationale (for controllability)	**ASIL Determination**	**Safety Goal**
Less than 90% of drivers are not able to maintain control over the vehicle, when a to high torque or frequency is applied to the steering wheel.	C	The oscillating torque to the steering wheel from the lane departure warning function shall be limited.
Because the driver's hands are not on the steering wheel at high speeds, a vehicle accident would not be controllable.	B	The lane keeping assistance function shall be time limited and the additional steering torque shall end after a given time interval so that the driver cannot misuse the system for autonomous driving.
The combination of curvy country roads, a too late steering torque and wet roads can cause the driver to loose control over the vehicle.	B	The electronic power steering ECU shall check that the actual provided steering torque is only a few ms behind the demanded torque. If the actual torque is provided too late the steering support torque shall end.
The combination of curvy country roads, high speed and a steering torque, that is too high can cause the driver to loose control over the vehicle.	D	The electronic power steering ECU shall check whether the indicated driver steering torque from the sensor is plausible (e.g. with a model based approach). If the indicated driver steering torque is not plausible the support torque shall end.

SD03 - Low speed	Night time + Obstacle on the road	IU01 - Correctly used
SD03 - Low speed	Night time + Obstacle on the road and no other illumination on road	IU01 - Correctly used
SD03 - High speed	Night time + Obstacle on the road or upcoming curve	IU01 - Correctly used
SD02 - High speed	Night time + Oncoming vehicle	IU01 - Correctly used
SD04 - High speed	Night time + Obstacle on the road and no other illumination on road	IU01 - Correctly used

Situation Description	Function	Deviation
Normal Driving on a City Road in Normal Conditions at Low Speed at Night with an Obstacle on the Road	Low beam illuminates the roadway in the dark	Function not activated

Situation Description	Function	Deviation
Normal Driving on City Road during Normal conditions with Low speed (Night time + Obstacle on the road)	Low beam illuminates the roadway in the dark	DV01 - Function not activated
Normal Driving on City Road during Snowfall (degraded view) with Low speed (Night time + Obstacle on the road and no other illumination on road)	Low beam illuminates the roadway in the dark	DV01 - Function not activated
Normal Driving on Highway during Snowfall (degraded view) with High speed (Night time + Obstacle on the road or upcoming curve)	Low beam illuminates the roadway in the dark	DV01 - Function not activated
Normal Driving on Country Road during Normal conditions with High speed (Night time + Oncoming vehicle)	Low beam illuminates the roadway in the dark	DV01 - Function not activated
Normal Driving on Country Road during Snowfall (degraded view) with High speed (Night time + Obstacle on the road and no other illumination on road)	Low beam illuminates the roadway in the dark	DV01 - Function not activated

Hazard Identification

Deviation Details	Hazardous Event (resulting effect)
Both headlights stop working	Front collision with obstacle

Hazard Identification

Deviation Details	Hazardous Event (resulting effect)
Both headlights stop working	EV04 - Front collision with obstacle
Both headlights stop working	EV04 - Front collision with obstacle
Both headlights stop working	EV04 - Front collision with obstacle
Both headlights stop working	EV08 - Collision with other vehicle
Both headlights stop working	EV04 - Front collision with obstacle

Event Details	Hazardous Event Description	Exposure (of situation)
Vehicle crashes into the obstacle with injury to driver	Total loss of low beam	E4 - High probability

Event Details	Hazardous Event Description	Exposure (of situation)
Vehicle crashes into the obstacle with injury to driver	Total loss of low beam	E4 - High probability
Vehicle crashes into the obstacle with injury to driver	Total loss of low beam	E1 - Very low probability
Vehicle crashes into the obstacle or road infrastructure with injury to driver and any others present	Total loss of low beam	E2 - Low probability
Vehicle crashes into the oncoming vechile or road infrastructure	Total loss of low beam	E4 - High probability
Vehicle crashes into the obstacle or road infrastructure with injury to driver and any others present	Total loss of low beam	E2 - Low probability

Rationale (for exposure)	Severity (of potential harm)
night driving in the city is a regular activity	S1 - Light and moderate injuries

Rationale (for exposure)	Severity (of potential harm)
night driving in the city is a regular activity	S1 - Light and moderate injuries
night driving in the city on completely unilluminated roads while it is snowing is rare	S1 - Light and moderate injuries
High driving is part of regular driving, however, heavy snow occurs a few times a year	S3 - Life-threatening or fatal injuries
country driving is part of regular driving	S3 - Life-threatening or fatal injuries
country driving is part of regular driving, however, heavy snow occurs a few times a year	S3 - Life-threatening or fatal injuries

Event Classification

Rationale (for severity)	Controllability (of hazardous event)
In city traffiic, speed of vehicle is expected to be low	C0 - Controllable in general

Event Classification

Rationale (for severity)	Controllability (of hazardous event)
In city traffiic, speed of vehicle is expected to be low	C0 - Controllable in general
In city traffiic, speed of vehicle is expected to be low	C1 - Simply controllable
On highway speed of vehicle is expected to be high	C2 - Normally controllable
On country roads speed of vehicle is expected to be high	C1 - Simply controllable
On country roads speed of vehicle is expected to be high	C3 - Difficult to control or uncontrollable

	Determination of ASIL and Safety Goals	
Rationale (for controllability)	**ASIL Determination**	**Safety Goal**
At city speed, most drivers will be able to control the situation by applying brakes and there is additional illmunitation on city roads	QM	Total Loss of Beam Shall Be Prevented

	Determination of ASIL and Safety Goals	
Rationale (for controllability)	**ASIL Determination**	**Safety Goal**
At city speed, most drivers will be able to control the situation by applying brakes and there is additional illmunitation on city roads	QM	Total loss of low beam shall be prevented
On completely unilluminated city roads, drivers usually drive at lower end of city speeds and hence are expected to be able to control vehicle	QM	Total loss of low beam shall be prevented
When driving on highway with low beam, it can be expected that there are other vehicles and there is some form of illumination on road and hence >90% drivers are able to brake and control the vehicle. And also use other forms of warning (e.g. hazard lights) to signal malfunction	A	Total loss of low beam shall be prevented
Since there is usually no other form of illumination to be expected on country road, it will be difficult for the average driver to control the vehicle in such a situation	B	Total loss of low beam shall be prevented
Since there is usually no other form of illumination to be expected on country road, it will be difficult for the average driver to control the vehicle in such a situation	B	Total loss of low beam shall be prevented

Exposure

ID	Description
E0	Incredible
E1	Very low probability
E2	Low probability
E3	Medium probability
E4	High probability

Severity

ID	Description
S0	No injuries
S1	Light and moderate injuries
S2	Severe and life-threatening injuries
S3	Life-threatening or fatal injuries

Controllability

ID	Description
C0	Controllable in general
C1	Simply controllable
C2	Normally controllable
C3	Difficult to control or uncontrollable

Duration (of situation)
Not specified
<1 % of average operating time
1 % to 10 % of average operating time
>10 % of average operating time

Remarks
No injuries
Light and moderate injuries
Severe and life-threatening injuries (survival probable)
Life-threatening injuries (survival uncertain), fatal injuries

Remarks
Controllable in general
99 % or more of all drivers or other traffic participants are usua
90 % or more of all drivers or other traffic participants are usua
Less than 90 % of all drivers or other traffic participants are us

Frequency (of situation)	Reference
	E0 - Incredible
Occurs less often than once a year for the great majority of dri	E1 - Very low probability
Occurs a few times a year for the great majority of drivers	E2 - Low probability
Occurs once a month or more often for an average driver	E3 - Medium probability
Occurs during almost every drive on average	E4 - High probability

Probability of Injuries	Reference
AIS 0 and less than 10 % probability of AIS 1-6	S0 - No injuries
More than 10 % probability of AIS 1-6 (and not S2 or S3)	S1 - Light and moderate injuries
More than 10 % probability of AIS 3-6 (and not S3)	S2 - Severe and life-threatening injuries
More than 10 % probability of AIS 5-6	S3 - Life-threatening or fatal injuries

	Reference
	C0 - Controllable in general
lly able to avoid harm	C1 - Simply controllable
lly able to avoid harm	C2 - Normally controllable
ually able, or barely able, to avoid harm	C3 - Difficult to control or uncontrollable
